

Technical Details

Cutting Landscapes

05

In-between Dig out prints

08:20h Analysis of a Landscape, Reconstruction with structural contour lines, Export for Cutter, e-nesting

10:30h Playground: cardboard model

12:00h End

06

08:20h Cutter Demo

09:30h alternate techniques: triangulation, unrolling

10:30h Playground: Cut and mount model with Forex and cold welding

12:00h End

07

08:30h Parametric

Schedule

Playground

Select a leftover of Forex and measure the thickness of the plate.

Adapt the dimension of Your Landscape to cut it out with that piece.

The Landscape is used as a socket for Your printed model?

Export the data as DXF – Cutter file on Your stick.

Cut it.

Assemble it with cold welding the PVC-foam called «Forex»

Reconstruct the landscape in a way, that maybe developed.

Use 1 sheet – 4 faces

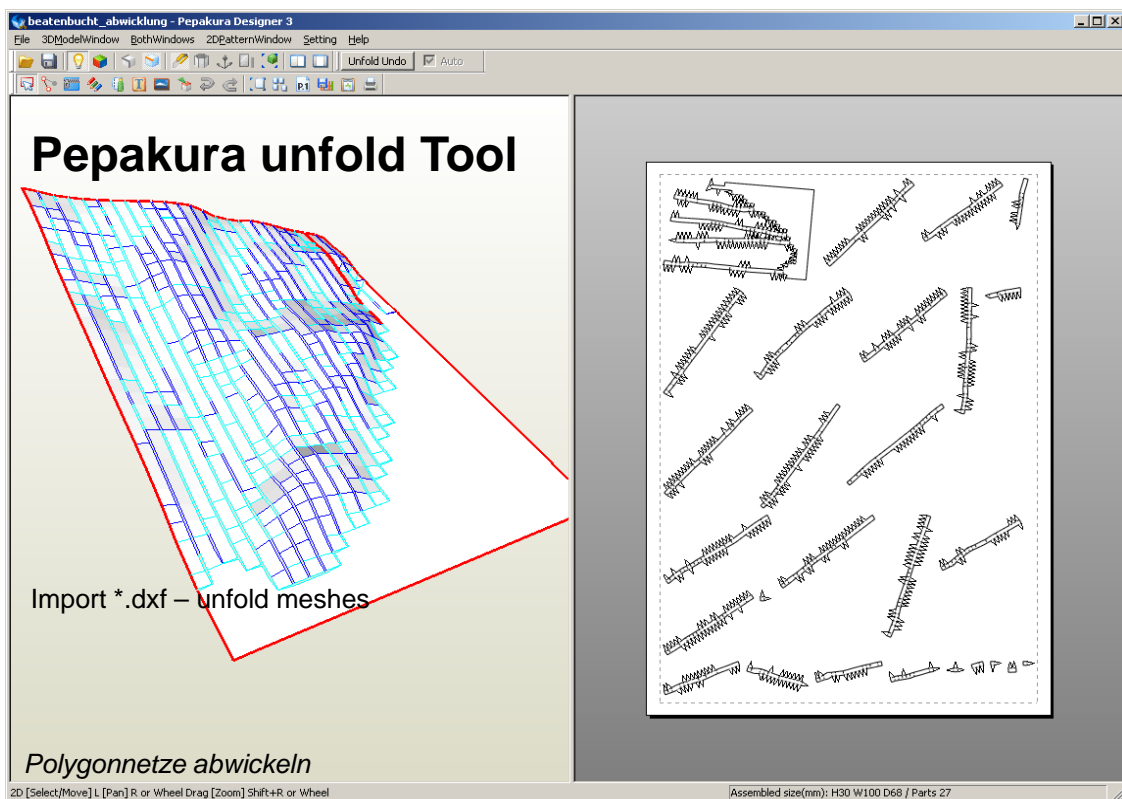

Boxcover

Wrap a Box

Cut in Parts

Loft even

Unwrap

Reduced Meshes

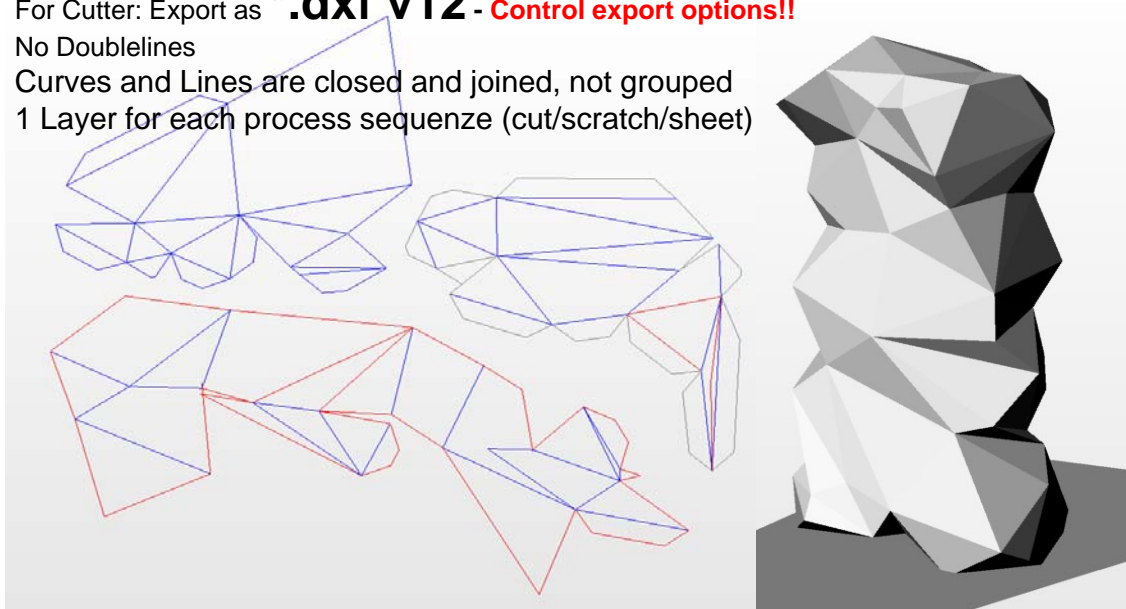

Unfolded with Rhino or «Pepakura» (= to unfold meshes, with seams and flaps)
Models with more than 40 faces will be difficult to assemble.

For Cutter: Export as ***.dxf v12** - **Control export options!!**

No Doublelines

Curves and Lines are closed and joined, not grouped

1 Layer for each process sequence (cut/scratch/sheet)

Workflow

Idea – 2D-Geometry – Data Format **DXF v12** (not 2012)

Before to draw: Choose Your material, sheet dimensions....

Cost: SFr 30.-/h = -.50/min from insertion to extraction of the Stick.

Model against money.

Please take Your material with you - after cutting put it out yourself and clean up.

Put the garbage in the container.

Please mount your model in an other room.

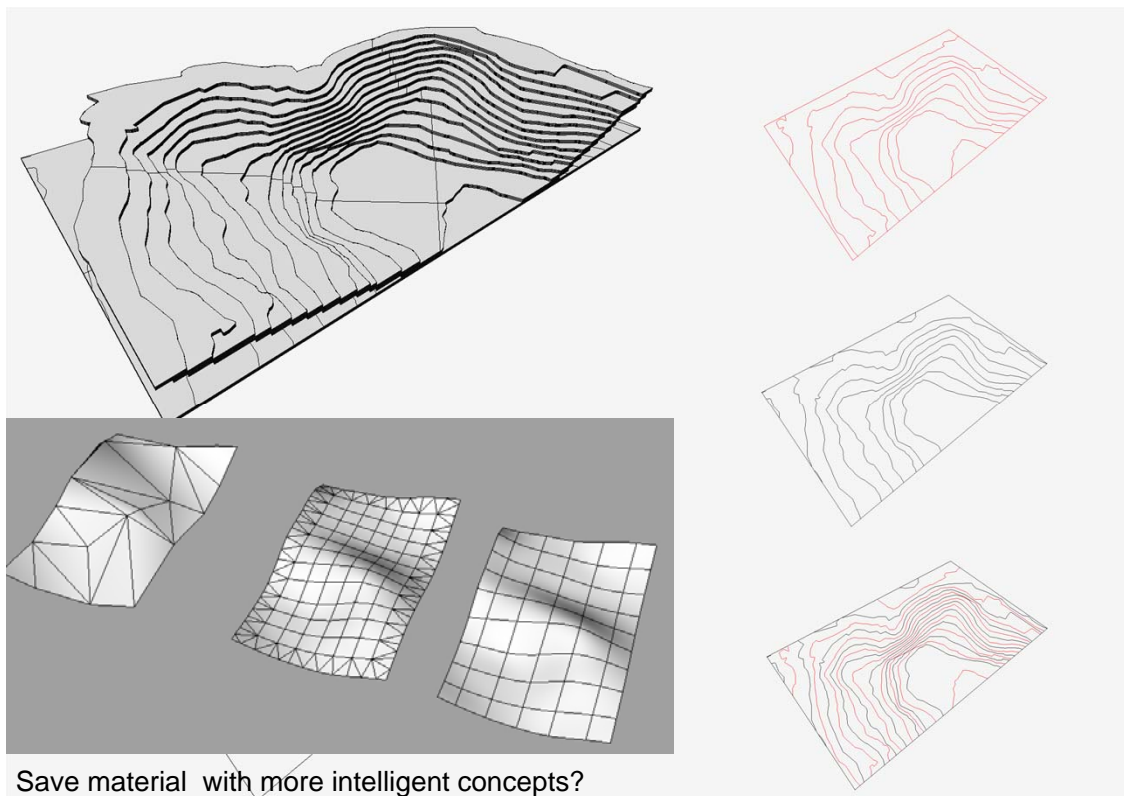

**Reservations not over 3hours with indication of mail and phonenumber
until eve 17:00h per Server:**

<https://sharepoint.bfh.ch/ahb/services/alab/default.aspx>

Please dergristate, if You are prevented for any reason

Tasks for school first, External Tasks have special prices.

Who masters drawings, cuts

Cutter – Design – DXF-Export with Rhino

2D–lines, joined, not grouped, no blocks,
No double-lines: waste of time

Data format

DXF– Export R 12 (not:2012)

One operation per layer

(Design / text, cut/ scratch)

Scratching for folding can also be a dotted
cutted line

One sheet upon the other

several layers in the same file,
named with sense,

scale 1:1 to the modell in mm

We cut Your model with CAMOD
